

BOVIVET Hoof Bandage & KRUUSE Hoof Gel

Your most powerful tool in the fight against digital dermatitis

Digital dermatitis

Digital dermatitis (DD) is a big problem in dairy herds. For cows, DD means pain that causes various degrees of lameness and directly impacts the animals' well-being.

Approximately 22% less chance of pregnancy

Countless research studies have shown that the disease has a direct impact on milk production, reproduction and hence life expectancy in production.

Average daily milk yield loss is 8.6% over a 5 months' lactation period

Ultimately, all these factors can damage the farmer financially to a considerable degree if nothing is done about the problem.

Traditional treatment and problems

Treatment

Management and treatment of the individual animal have been found to be the most effective weapons in the fight against DD. All infected animals in the herd should be treated at the same time, so called "Blitz Treatment".

Complication resulting from traditional dressing

Traditional treatment consists of

- Washing the hoof thoroughly
- Applying an antibiotic/drying agent such as salicylic acid powder
- Applying a dressing, which must typically remain in place for 3 days

Problems with this "traditional" treatment method consists of the following

- Applying a dressing is difficult and time consuming
- Salicylic acid powder is often hard to dose correctly and can be risky to the user's health due to inhalation of powder
- The dressing may not be tight enough and can fall off
- The dressing may be too tight, leading to complications such as sores resulting from a restricted blood supply
- The dressing may be hard to remove again

KRUUSE Hoof Gel and BOVIVET Hoof Bandage are the best tools for treating digital dermatitis

BOVIVET Hoof Bandage

BOVIVET hoof bandage is a complete bandage – ready to apply.

It is made from a water-repelling material. Its shape and elastic materials are designed to keep the stocking in place.

A treatment pad placed inside the bandage makes dosing easy once the bandage is in place; KRUUSE hoof gel 38% eg.

The bandage remains in place, and you can rest assured that there will not be complications. BOVIVET hoof bandage is easily and quickly positioned, makes dosing easy, and is easy to take off again.

Comes in 2 sizes

Size XL: Fits most breeds

Size L: Fits small breeds and heifers

Cat. No Item Description

220411 BOVIVET hoof bandage, white quality, L, 10/pk

220413 BOVIVET hoof bandage, blue quality, L, 10/pk
